

Churches and chapels: the long view (England)

A 200-year perspective to help make sense of today's changes and pressures

data for England only, except number 3 – rest of UK a different story

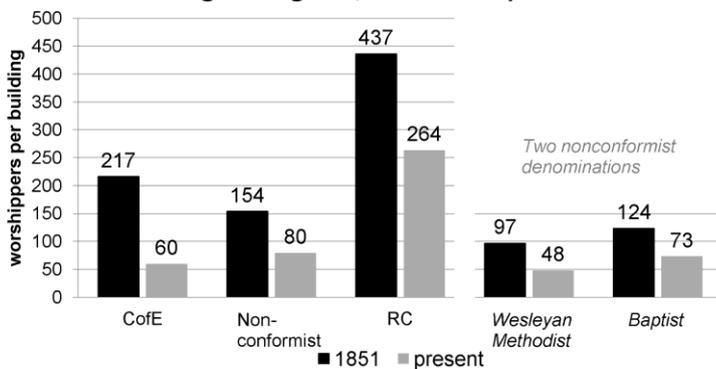

Kent: number of new church buildings, by decade

1. Church building in the 19th century

- Population nearly quadrupled 1800-1900
- Churches not full in nineteenth century, building on expectations, competition
- All denominations built; Free churches more than CofE; RC started low, accelerated
- **Legacy of overbuilding and overseating**

Number of all-age Sunday worshippers per church building* in England, 1851 and at present*

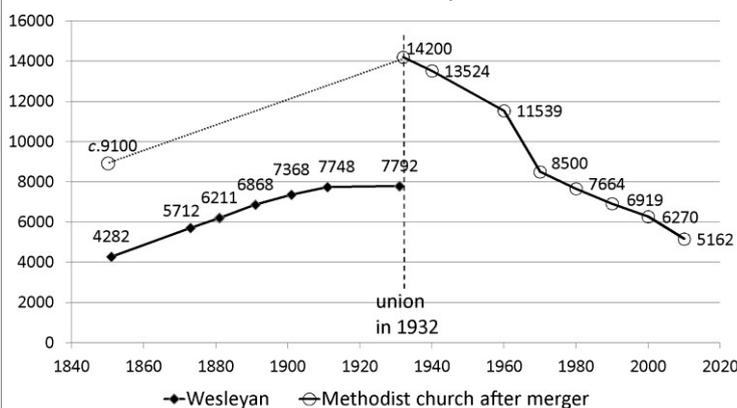

* for 1851, regardless of whether the 'church' was a separate building
* for 1851, the best-attended service on Sunday; for the present, all Sunday services

2. Fullness of churches in 1851 & today

- Since ?1850s church attendance dropping as proportion of population – since ?1900 not matched by population growth
- Adaptation by closure, but closing more slowly than congregations reducing . . . so churches much emptier than in 1851
- CofE largest change since 1851 (harder/less willingness to close)
- **Explains some of today's pressures to adapt buildings / close them**

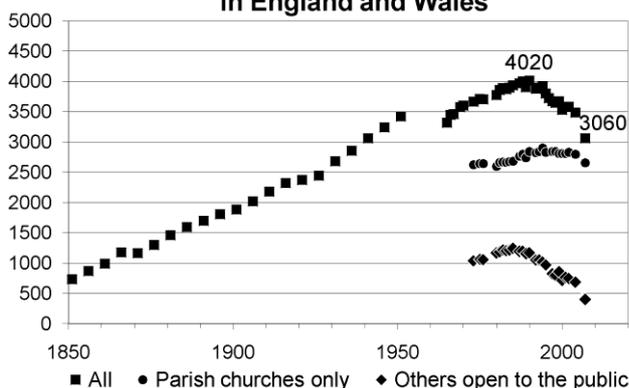

Number of Methodist chapels before and after 1932 union, Great Britain

3. Number of Free churches (Methodists as proxy)

- Fast growth in 19th century, levelling off, fast shrinkage 2nd half of 20th century
- Could be built on borrowed money (e.g. against future pew income)
- 'Easy' to open/close, considerable 'churn'
- About 10% listed (underlisted)
- **Methodist churches closing at approximately 2% per year**

Number of Roman Catholic churches in England and Wales

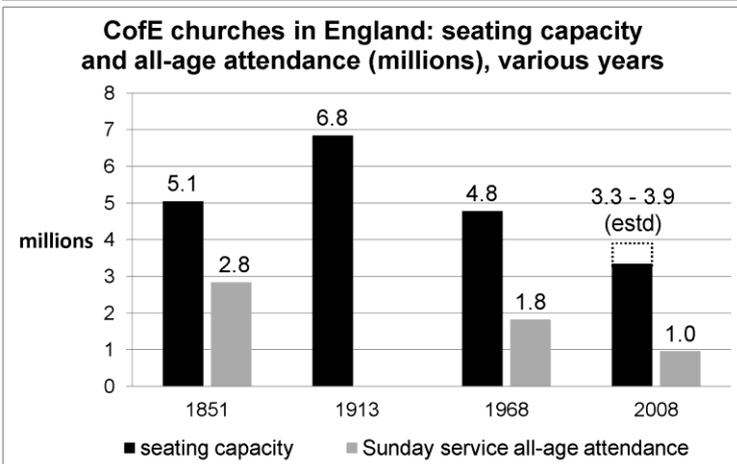

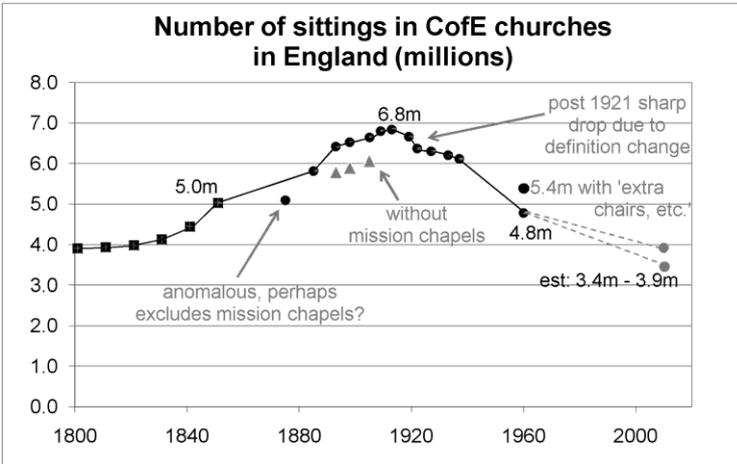

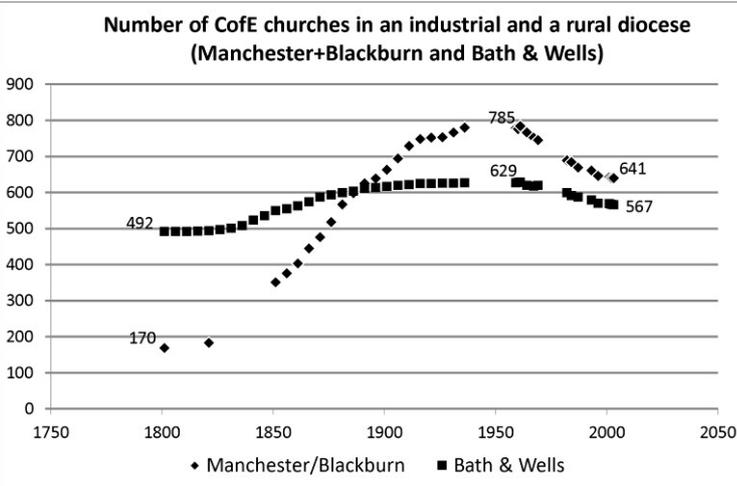

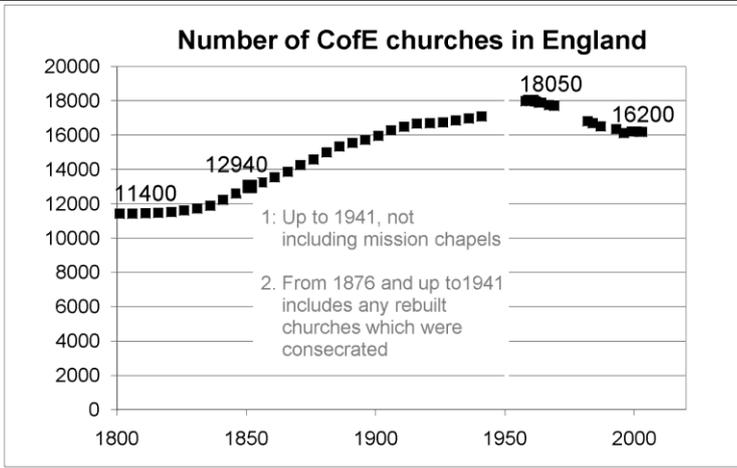

4. Number of Roman Catholic churches

- Low base, carried on growing until the late 20th century, approx sixfold increase, now closing
- 18% listed (underlisted)
- Same number of worshippers as CofE (approx), one fifth as many churches (approx) – churches worked hard
- 'Easy' to close

• **Rate of closure approx 1% per year**

5. Church of England churches

- Steady growth (slower than other denominations),
- Slow shrinkage of network during 20th century (harder/less willing to close, slower than other denominations' closure programmes)
- Closure includes closure of mission chapels
- Recent rate of closure 30 or fewer per year, now dropping (so less than 2% per decade)
- Most growth in industrial areas, and up to now most closures too – myth that closures have been rural medieval churches

- Victorian overpewing (grants, expectations, income)
- Thinning out of pews during much of 20th century in reaction to overpewing and reduced attendance
- Current rate of *total* depewing probably between 2% and 4% of churches per decade

- CofE still has overcapacity (e.g. twice number of seats needed at Easter)
- **Given the desire to avoid closure, new pressures include**
 - downward drift in routine attendance / smallest congregations
 - shortage of stipendiary ministers
 - reduced volunteering
 - shortage of young people (often wrongly described as 'ageing')
- **Helpful structural changes include**
 - public £ support & support officers
 - non-stipendiary ministry
 - wider use of buildings / base for regeneration
 - tourism
 - Friends groups

FOR REFERENCE

Number of listed places of worship (POWs)					
Larger figures rounded, totals separately rounded					
	All POW		Listed POW		
		Total listed	by grade of listing		
			I	II*	II
ENGLAND

GB & NI					
England		14500	4070	4510	5930
Wales		1990	170	470	1340
Scotland		2470	370	1570	540
Northern Ireland		900	42	140	710
TOTAL		19850	4650	6680	8520

- In England, CofE has approximately 83% of listed places of worship (61% of UK), and most of the highly-listed church buildings in England
- Other denominations underlisted (increasing appreciation and access)
- In England, CofE has about 45% of all Grade I listed buildings (religious+secular)
- Unlike most other listed buildings, many 'owners' are volunteers with no personal financial stake in the building
- Listing brings regulatory burden along with access to limited public funds
